PROJECTS/PRODUCTS

Aleph-technologies.com
1/2020-5/2020

Developed a full-stack Event Management Solution from Aleph Technologies LLC. Designed and implemented the frontend using ReactJS, React Context Hooks and Bootstrap. Maintained the application and guaranteed its' stability and success.

Ecommerce Web App - *timefoxwatch.com*
11/2019-1/2020

Developed a full-stack web application that worked as an online watch store with many advanced features of a real-life eCommerce web application. Designed and implemented the frontend using **React.js, Redux** and **Bootstrap.** Built a back-end server using **Node.js**, Express.js and Mongo taking advantage of well-developed **RESTful API** and following **MVC Pattern**.

Web Apps Ultimate-Authentication
8/2019-10/2019

Implemented a full-stack authentication system for web applications with features like account activation, forgot password, reset password, login with Facebook as well as Google using private and protected routes for authenticated user and users with the role of admin in **React.js** environment connected to a **RESTful API** written in **Node.js following MVC Pattern**.

Budgeting Web App
8/2019-9/2019

Built **React/Redux** application that helped users track their income, expenses and offered them a snapshot of their remaining budget to help them avoid overspending.
Utilized **Firebase** to implement the server-side services including authentication, database and API.
